2026 GCCA COLD CHAIN INNOVATION BUYERS GUIDE

RefrigiWear®

INTRODUCING THE THERMASYNC™ HEATED PPE SYSTEM

**Continuous warmth from your
core to your fingertips.**

Cold doesn't just make the job uncomfortable; it slows workers down, reduces dexterity and increases fatigue.

The ThermaSync™ Heated PPE System was engineered to solve those challenges. The battery-powered ThermaSync™ Jacket delivers targeted warmth to your core, while the magnetic power connection extends heat to the ThermaSync™ Glove for continuous warmth all the way to your fingertips.

Built with industrial-grade materials, flexible four-way stretch and durable, weather-resistant construction, ThermaSync™ helps workers stay warm, comfortable and productive through long shifts in cold storage, refrigerated warehouses and outdoor industrial environments.

**Stay warmer. Work longer.
Perform better.**

**Shop the ThermaSync™
Heated PPE System
at Pro.RefrigiWear.com**

DESIGN-BUILD EXCELLENCE FOR SMARTER OPERATIONS

Automated Facilities / Cold Storage / Distribution / Pharma-Cold / Processing

With 35 years of experience and more than 500 successful projects, ESI Group leads the design and construction of turnkey, climate-controlled facilities for the food and pharmaceutical industries.

ESI Group helps you:

- ✓ **Maximize Operational Efficiency**
- ✓ **Reduce Project Costs**
- ✓ **Ensure Regulatory Compliance**

Our single-source approach means fewer headaches, faster timelines, and proven results—**backed by an 85% repeat client rate.**

50%

OneDek® system uses over 50% fewer materials compared to traditional systems.

20%

OneDek® system offers up to 20% reduction in embodied carbon compared to traditional systems.

80%+

Our LEC (lower embodied carbon) option allows for at least 80% recycled steel content compared to traditional roofing systems.

TRANSPARENCY YOU CAN TRUST

All Weather Insulated Panels has developed over 30 third-party verified Environmental Product Declarations (EPDs) that provide the most granular, site-specific and product-specific data available. Our product options such as InnovaCELL™ or LEC steel offer architects embodied carbon reductions.

Explore our EPDs to see how we're setting a new standard for sustainability at awip.com/transparency

MESSAGES FROM GCCA LEADERS

INNOVATION CONTINUES TO RESHAPE THE GLOBAL COLD CHAIN. NEW TECHNOLOGIES, ADVANCED MATERIALS, AND SMARTER WAYS OF WORKING ARE HELPING COMPANIES DESIGN, BUILD, AND OPERATE COLD STORAGE FACILITIES AND LOGISTICS NETWORKS THAT ARE SAFER, MORE EFFICIENT, MORE RESILIENT, AND BETTER PREPARED FOR THE FUTURE.

The 2026 GCCA Cold Chain Innovation Buyers Guide showcases GCCA Associate Members whose products, services, and expertise support every stage of temperature-controlled operations. From facility design

and construction, insulation and paneling, refrigeration, automation, and energy management to transportation, software, safety, and specialized professional services, the companies provide the solutions that keep the cold chain moving.

These members are essential partners in progress. They bring fresh ideas to longstanding challenges, introduce new materials and capabilities, and work alongside operators to improve overall performance.

I encourage you to use this guide throughout the year to explore solutions, connect with trusted partners, and find the expertise your organization needs to grow.

The companies featured here reflect the collaboration and commitment that make our industry stronger and help deliver food and other essential products safely and reliably around the world. 🌐

SARA M. STICKLER, CAE
PRESIDENT AND CEO, GCCA

MAKE SURE YOUR BRAND IS IN THE COLD CHAIN CONVERSATION

Every relationship depends on trust, and trust is built in person. In 2027, our events will bring together 3PL warehouse owners & operators, carriers, researchers, technology innovators, and other professionals who are shaping what's next in temperature-controlled logistics.

Sponsor a GCCA event and put your brand in front of the decision-makers who matter, throughout the year and around the world.

Contact GCCA for your 2027 Sponsorship Prospectus

COLD CHAIN BUYERS GUIDE

GCCA COLD CHAIN INNOVATION BUYERS GUIDE

The 2026 GCCA Cold Chain Innovation Buyers Guide includes only companies that are members of the Global Cold Chain Alliance and are innovative leaders in the temperature-controlled warehousing, transportation and logistics industry.

This directory is your source for any company supplying products and services to the temperature-controlled warehousing, logistics, transportation, and construction industry.

To access listings that contain full supplier and technology provider company details for all GCCA Members, please visit the GCCA Directory at www.gcca.org/directory. The GCCA directory also lists temperature-controlled warehousing and logistics providers who are members of GCCA. To be featured in this buyers guide and the online directory, contact Josh Meyers at jmeyers@gcca.org.

PRIMUS | MOVUTM robotics

PRIMUS & MOVU ROBOTICS

ONE PARTNER FOR DESIGN, CONSTRUCTION, AND AUTOMATION.

Today's supply chains are under increasing pressure to move faster, store more, and operate with greater precision. Labor constraints, rising throughput demands, and the need for operational flexibility are driving companies to rethink how modern facilities are designed and built. Through a strategic partnership with MOVU Robotics, Primus is helping clients bridge the gap between facility construction and automation, delivering integrated solutions that maximize performance from day one.

Modern automation cannot be treated as an afterthought. Too often, automation systems are introduced after facility design is complete, creating costly redesigns, inefficiencies, and operational limitations. Primus takes a different approach by integrating automation during the earliest stages of planning, engineering, and construction. This ensures the building, systems, and automation technology work together as one coordinated solution.

At the center of this partnership is MOVU Robotics atlas, an advanced 4-way pallet shuttle system designed to deliver:

- Higher storage density
- Increased throughput
- Flexible, scalable expansion
- Reliable performance in ambient and cold storage environments
- Greater adaptability as operations evolve

By incorporating these automation solutions directly into facility design, Primus helps owners reduce complexity while creating facilities that are built for long-term operational success.

Instead of coordinating multiple vendors, owners gain a single partner responsible for design, construction, and automation integration. The result is fewer handoffs, faster project delivery, reduced implementation risk, and greater accountability from concept through commissioning.

READY TO TAKE THE FIRST STEP TO AUTOMATING YOUR PROCESS?

The Inventory Drone That Lives In Your Freezer

Manual cycle counts in sub-zero environments have always meant sending people into hazardous cold, again and again, just to keep inventory data current. Corvus One for Cold Chain removes that need for good.

Built to Live in the Cold

Corvus One for Cold Chain docks at its own charging pad inside your freezer and flies autonomous inventory counts around the clock. There is no pilot, no operator, and no one entering the cold to do this work again. It's rated for continuous operation down to -20°F, holding the same performance at the coldest point in your facility as it does in ambient conditions.

Engineered for Extreme Cold

Extreme cold degrades battery performance and fogs optical sensors. These are real problems for any equipment operating in a freezer, and **Corvus One for Cold Chain** was engineered around them from the start, with purpose-built battery architecture, airflow stabilization flight control, and imaging systems calibrated to read clearly through ice and frost.

The Business Case

Every hour your team spends on manual cycle counts in the freezer is an hour not spent on picking, replenishment, or other higher-value work. Every trip into sub-zero conditions also carries real exposure risk and liability. **Corvus One for Cold Chain** removes both, delivering continuous, autonomous data with no cold exposure for your team.

Works With What You Already Have

Corvus One for Cold Chain deploys in a few weeks with no changes to how your team already operates. It reads your existing barcodes and labels, so there's no new tagging or scanning standard to adopt, and it integrates with any Warehouse Management System. Navigation requires no beacons, stickers, or fixed markers anywhere in your facility. Your operation runs exactly as it does today, with no facility downtime.

Request an ROI Briefing

corvus-robotics.com/cold-chain

CORVUS
ROBOTICS

Corvus Robotics builds autonomous inventory systems for warehouse and distribution operations nationwide. Corvus One for Cold Chain applies that same proven platform to the demands of freezer and cold storage environments.

STORE MORE. MOVE FASTER. *Deliver Fresh.*

Automation Designed for Every Temperature

Food and beverage supply chains demand speed, accuracy and flexibility while meeting strict food safety requirements. Whether storing ingredients, finished goods or frozen inventory, Toyota Automated Logistics designs integrated Unit Load ASRS solutions that maximize warehouse capacity, improve inventory control and streamline pallet movement throughout your operation.

Our solutions support manufacturers, processors and distributors by automating storage and retrieval while integrating seamlessly with production, palletizing, conveying and shipping systems.

Why Food & Beverage Leaders Choose ASRS

- › Maximize Warehouse Capacity
- › Improve Inventory Accuracy
- › Increase Throughput
- › Reduce Labor Dependency
- › Support Food Safety
- › Operate Across Every Temperature Zone

Ready to optimize your food & beverage warehouse?

Learn more at: toyota-automated-logistics.com/industries/food-beverage

For every challenge, a reliable solution.

The Natural Leader For LIFE

Why NH₃ & CO₂?

EVAPCO is focused on the innovation and manufacturing of industrial refrigeration equipment and systems designed for use with the leading two natural refrigerants in the world - NH₃ and CO₂. Synthetic refrigerants (Freons) dominated the commercial market for decades, but the escalating enforcement of the American Innovation and Manufacturing Act (AIM Act) has solidified the phasedown of production and consumption of HFCs. Many states, and now the federal government (specifically the EPA), started this initiative, and are now executing it, because of the harmful effects HFCs have on the environment.

Today, and long into the future, natural refrigerants are the most climate-friendly solutions available in the industry. Ammonia (R-717) is the most environmentally friendly refrigerant available because it has a 0 rating for Ozone Depletion Potential (ODP) and Global Warming Potential (GWP). These environmental benefits, combined with the refrigerant's unmatched thermodynamic properties and energy efficiency have made it the most widely used low temperature refrigerant in the world.

Carbon Dioxide (R-744) is gaining more traction in the refrigeration industry as an alternative to synthetic refrigerants. With an ODP of 0 and a GWP of 1, CO₂ is a very eco-friendly refrigerant. Also, some end users may choose CO₂ over NH₃ because of the lower toxicity.

With the phasedown of HFCs in full swing, we are seeing NH₃ and CO₂ becoming the go-to refrigerant solutions for the foreseeable future, and **EVAPCO offers you both technologies!**

Evapcold®

Ammonia Safety with Huge Energy Savings

Get the best of both worlds with Evapcold®, the factory assembled, low charge ammonia refrigeration system that sets the bar for both safety and sustainability.

Requiring just a fraction of the R-717 charge associated with traditional field-built systems, each Evapcold® unit is expertly crafted as a single-source, quick-to-install solution. The entire system offers simple plug-and-play installation and faster startups with significantly less on-site labor than its field-built alternatives.

Evapcold® LCR products include several state-of-the-art innovations in heat transfer technology, energy efficiency and Allen-Bradley PLC controls for reliable low charge operation. EVAPCO has invested heavily, and continues to do so, in developing new models and configurations under the Evapcold® brand and the product model nomenclature "LCR" (Low Charge Refrigeration). This includes LCR-P Penthouse units, LCR-C Chillers and the new LCR-S VersaSplit system units.

EVAPCO LMP Complete CO₂ Systems

EVAPCO LMP Transcritical CO₂ Systems are a great choice for many applications, including Cold Storages. These systems offer an efficient, environmentally friendly and sustainable solution for your refrigeration needs. Combining the LMP Transcritical package with EVAPCO's certifiable high pressure CO₂ evaporators and industrial eco-Air™ gas cooler on your next project will ensure the highest system efficiencies plus single source responsibility from your trusted partner, EVAPCO. The patented flagship Purity line of transcritical CO₂ systems is suitable for blast, freezer, medium and high temperature applications. EVAPCO LMP also supports secondary fluid applications with its Yellowstone pumping station package. All EVAPCO LMP systems are designed and manufactured with simple installation and rapid commissioning in mind.

Because you have a
Natural Choice!

You Can't Out-Build the Giants. You Can Out-Adapt Them.

Why operational adaptability is becoming the defining competitive advantage in cold storage, and what that means for your WMS

By Datex

What If Capacity Is No Longer Your Competitive Advantage?

For decades, competitive advantage in cold storage was straightforward.

More warehouse capacity.

Broader geographic reach.

Greater scale.

Today, those advantages alone are no longer enough.

Market consolidation is reshaping the industry. Customer expectations continue to rise. Automation is becoming more accessible. What once set warehouse operators apart is now expected.

Today's challenge is no longer simply handling more inventory. It's managing more operational complexity.

The Next Customer Is the Hardest One You'll Win.

One customer requires catch-weight billing.

Another introduces retailer-specific compliance requirements.

Another wants value-added services.

Every new customer changes how the warehouse operates.

The challenge isn't handling more inventory. It's adapting to greater complexity faster than your competitors, without sacrificing performance.

That complexity compounds as providers expand into adjacent markets or introduce new service offerings. New operational requirements don't replace what's already there. They build on top of it.

Complexity Isn't the Problem. Poor Adaptability Is.

You can't add capacity overnight.

You can't automate everything.

You can't count on labor.

The next generation of cold storage leaders won't be defined by the size of their facilities. They'll be defined by how quickly they adapt to change. Designed for the demands of cold storage,

Footprint WMS helps providers manage multi-temperature operations, client-specific workflows, billing, traceability, recalls, and inventory visibility from a single platform.

It gives operators the flexibility to adapt to changing customer requirements while improving product integrity, operational performance, customer service, and profitability.

Building an Operation That Can Adapt

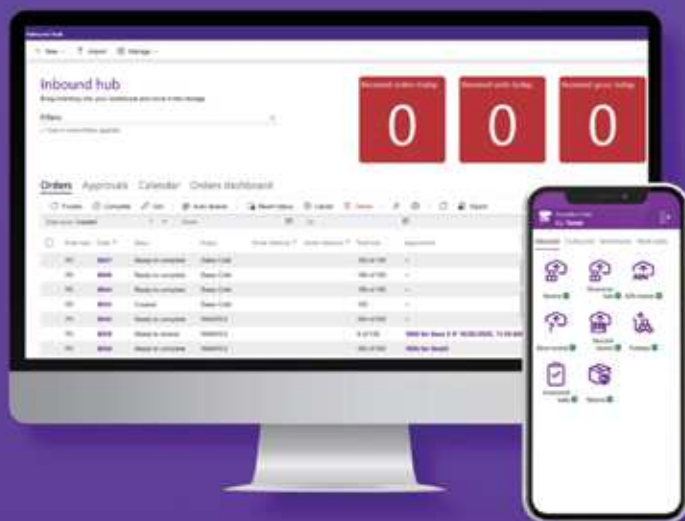

That's where Footprint® WMS comes in.

Designed for the operational realities of cold storage, Footprint WMS helps providers manage multi-temperature environments, client-specific workflows, catch-weight billing, automated billing, complete lot traceability, recalls, inventory visibility, and customer-specific business rules, all from a single platform.

Powered by Datex Studio, our low-code application platform, and enhanced with Footprint Analytics, our AI-powered intelligence layer, Footprint WMS gives operators the flexibility to evolve with changing customer requirements without compromising product integrity, operational performance, customer service, or profitability.

Expect More From Your WMS.

Because complexity isn't slowing down. Your operation shouldn't either.

**Ready to see what
Footprint WMS can do?**

REFRIGERATION + THERMAL CONSTRUCTION

THE SYSTEM. THE ENVELOPE. ONE TEAM.

Republic delivers integrated industrial refrigeration and thermal construction for cold storage and food-processing facilities. Our refrigeration team designs, fabricates, installs, and services ammonia and CO2 systems, while our Thermal Construction Division provides full-service interior and exterior building-envelope installation for cold storage, processing, and architectural insulated metal panel applications.

INDUSTRIAL REFRIGERATION

- Ammonia and CO2 design-build systems
- In-house engineering and fabrication
- Electrical power, controls, and system integration
- Installation, startup, and ongoing service

THERMAL CONSTRUCTION

- Interior and exterior insulated metal panel systems
- Cold storage and food-processing applications
- Walls, ceilings, and roofing systems
- New construction, expansions, and renovations

PLANNING A COLD STORAGE OR PROCESSING PROJECT?

GCCA CONVENTION

MAY 17-19, 2027 | MIAMI, FL

SAVE THE DATE

JW Miami Turnberry Resort & Spa
Miami, Florida | #GCCACon2027

Keynotes exploring client-side thought leadership in the food industry, major economic impacts, and the business of the cold chain. Educational programming designed to give actionable strategies for issues in workforce development, energy management, technology & automation, and regulatory compliance. First in class networking activities to build long-lasting industry relationships.
